

# CALLGUARD IP

CallGuard IP is a range of Nursecall equipment that includes the world's first true IP solution where all system components are fully IP configurable and have their own unique address for best in class supervision and system management. Carer stations and Resident call units use SIP VoIP (Voice over Internet Protocol) offering non-blocking audio connectivity when integrating wired and wireless solutions on your existing IT infrastructure.

The CallGuard IP System enables nurses to provide prompt and effective responses to residents' calls at all times. Embracing solid state electronic technology and software, CallGuard IP incorporates a comprehensive and flexible range of call types, priority levels, alarm handling and call indication options configurable to best suit the operational needs of any Care Facility.

The easy-to-use touch screen console used in conjunction with the single platform, single server solution will tidy nurse stations and simplify installations for future add-ons. Designed to connect to most popular systems on the market, the system uses industry standard protocols to protect investments and deliver hassle-free, seamless plug and play integration.

CallGuard IP offers nursing care specific management reporting, providing carers and managers with workflow and performance data relevant to the area, the zone or room or group of care homes within the organisation.

Nursecall Messaging over DECT and WI-FI

The NurseCom® platform incorporates one of the worlds best-selling Nursecall systems which has the flexibility and intelligence to allow integration with standard telecommunication devices i.e. mobile and fixed position telephone handsets as well as incorporating flexible software which allows comprehensive management of system activity.
