

WanderFree LPS

Transforming freedom and choice for those in a care environment

The ENS Wanderfree solution provides a site-wide safety net enabling residents within a care-home setting to wander freely, without restriction.*

Using Bluetooth technology and a non-intrusive philosophy, ENS Wanderfree supports both residents and carers by increasing confidence without the need for constant intrusive monitoring.

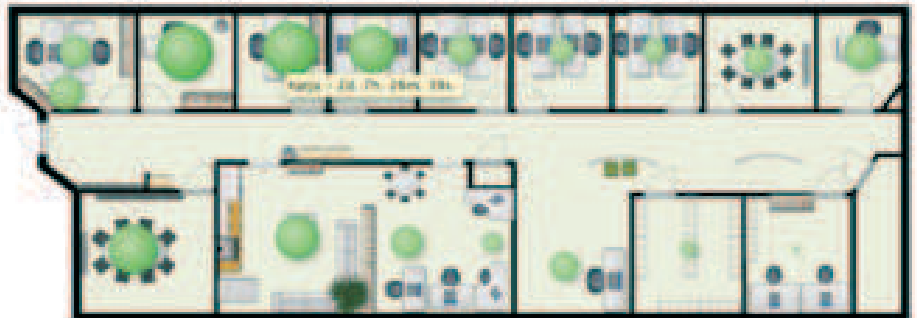

Technology tailored to every resident's individual needs ensures their greatest level of freedom whilst providing safety for vulnerable residents in risk areas with discreet alerts to carers.

ENS Wanderfree provides a powerful reporting tool which can empower carers and management with:

- Resident mobility report
- Resident lifestyle patterns
- Reports on all care visits
- Exception to 'normal behaviour pattern' reports
- Nursecall activity and response
- Social interaction reports

The ENS Wanderfree integrates with :

- ENS Digital Nursecall
- ENS DementiaSafe
- ENS Critical Call Messaging
- ENS Access Control
- ENS CareBuddy EPOC

Graphical view of resident/staff activity for one week

Staff Duress

The ENS Wanderfree also provides staff robust staff duress solution.

By simply pressing their transmitter fob a message will be sent detailing the ID and exact location of the caller.

The information will be received on the screen of the carers smartsets and on fixed position display units.

Installation

Deployment of one node per bedroom, dayroom and in appropriate locations in corridors.

Each node requires a CAT 5 outlet.

Central equipment requires 4 x power outlets and access to a data network.
